

# TASK 4 — Clothing Recommendation Logic

**Name:** Praneetha AS ([aspraneetha29@gmail.com](mailto:aspraneetha29@gmail.com))

**Role:** AI/ML Intern

**Date:** 14/05/2026

**Project Folder:** Raritone

## 1. Introduction

Clothing recommendation systems aim to suggest suitable clothing based on user body measurements and preferences.

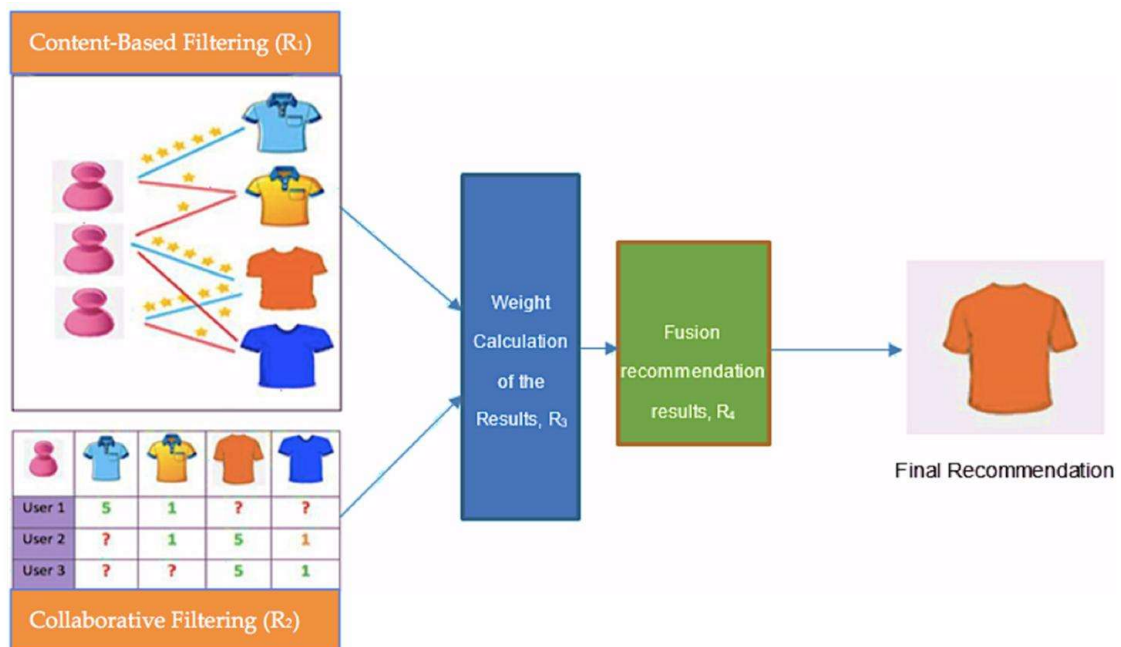

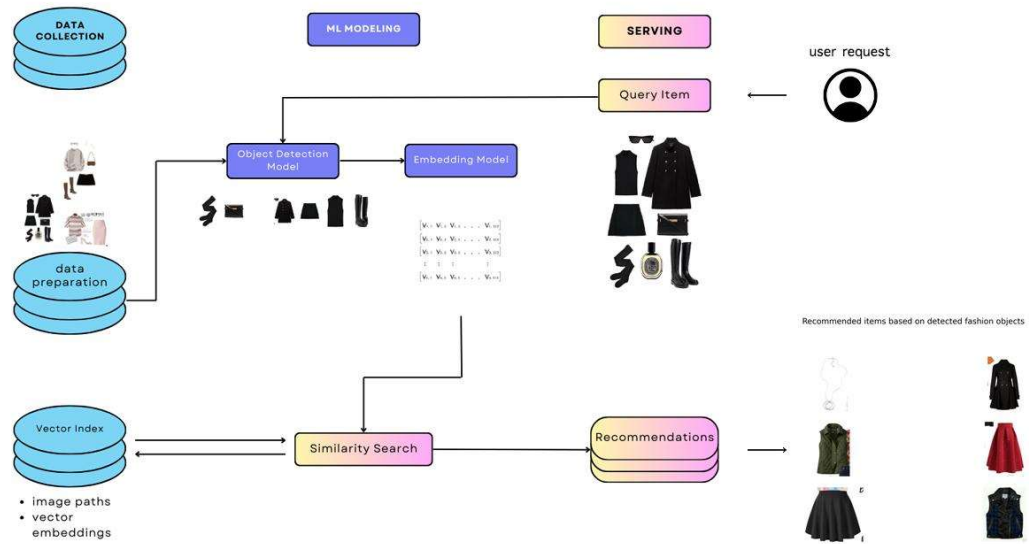

## 2. Working Approach

The system uses body measurements such as shoulder width and waist size to classify users into different categories.

## 3. Logic Implementation

- Small → narrow body measurements
- Medium → average measurements
- Large → wider body

## 4. Diagram

## 5. Applications

- Online fashion platforms
- Personalized recommendations
- Smart wardrobe systems

## **6. Advantages**

- Saves time
- Improves user experience
- Reduces incorrect purchases

## **7. Conclusion**

Clothing recommendation systems play a vital role in modern e-commerce by providing personalized suggestions.
