

TASK 5 — MediaPipe vs OpenPose

Name: Praneetha AS (aspraneetha29@gmail.com)

Role: AI/ML Intern

Date: 14/05/2026

Project Folder: Raritone

1. Introduction

MediaPipe and OpenPose are two widely used frameworks for human pose detection.

2. MediaPipe

- Lightweight
- Real-time processing
- Easy integration

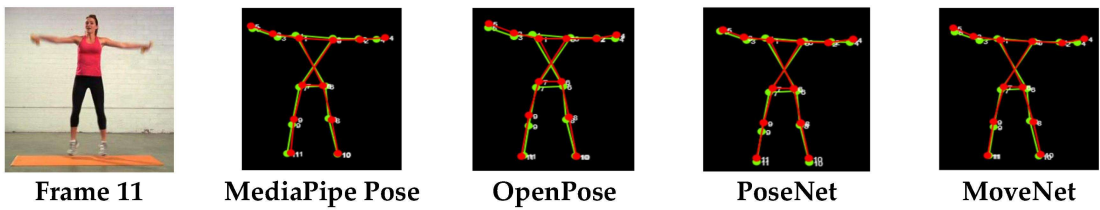

3. OpenPose

- High accuracy
- Detects multiple people
- More computationally intensive

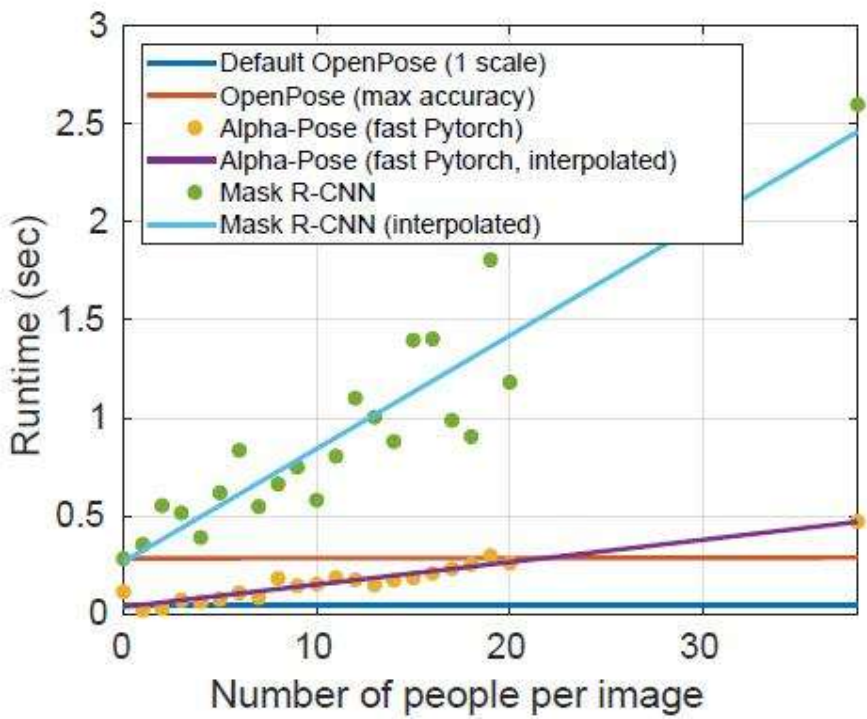

4. Comparison Table

Feature	MediaPipe	OpenPose
Speed	Fast	Slower
Accuracy	Good	Very High
Setup	Easy	Complex
Resource Usage	Low	High

5. Visualization

	OPENPOSE	MEDIAPIPE	DETECTRON2
FEATURES	Full-body, face, and hand keypoint detection	Full-body keypoint detection	Multi-person keypoint detection
PERFORMANCE	High accuracy, heavier computational load	Efficient, suitable for mobile devices	High accuracy with multi-person handling
USE CASES	Real-time applications, research	Mobile and real-time applications	Research and production environments

6. Observations

- MediaPipe is better for real-time apps
- OpenPose is better for research

7. Conclusion

Both frameworks have their advantages. The choice depends on the application requirements.
